The purpose of this modification is to add items for certification and packaging of software. Accordingly, the contract is modified as described herein.

1. Under Part One, Table Five add the following:

Item	Service	Min Qty	Service Price
0047	Software Certification		
0047AA	Software Certification – Simple		\$4,136.00
0047AB	Software Certification - Complex		\$6,488.00
0047AC	Supplemental Package		\$1,385.00
0047AD	Supplemental Script		\$781.00

2. Under Part One, add the following Item Descriptions:

**0047 Software Certification and Packaging:** For Government ordered certifications, the Contractor shall provide services to test as a means to determine whether a software application functions as designed, integrates with the NMCI Infrastructure, and passes required security scans. Only certified applications will be added to the NMCI infrastructure. Packaging and testing is accomplished using this certification. Provided such software (i) can be packaged and certified without interoperability or compliance problems with the Gold Disk and (ii) is IA port and protocol compliant, this service is available for:

(1) COTS software (and associated upgrades) to be added to the CLIN 0023 Catalog - Attachment 12 at Government request. (Note, there is no charge for security patches that are to be applied to already certified software contained on the CLIN 0023 Catalog provided a new release or version of the COTS software is not required.)

(2) COTS software (and associated upgrades) acquired by the Government other than via the CLIN 0023 Catalog provided:

- a. the Government is responsible for obtaining permission from the Original Equipment Manufacturer (OEM) to allow the Contractor to access the software for certification purposes, and

- b. the Government is solely responsible for ongoing maintenance and support of the software.

(3) GOTS upgrades, patches, and emergent (new) applications.

This service includes testing, certification and packaging for distribution of the individual software only. If desired, re-engineering solution development or hosting environment development, etc. will be negotiated between the parties as a separate effort. Software submitted must comply with the then current NMCI Release Development and Deployment Guide. Accreditation and Risk Mitigation is a Government responsibility. This service will provide up to three attempts to certify the subject software application(s). After each failure the Test Summary Report will be provided to the Government stating the reasons for failure.

This service is not required for software received from the Computer / Electronic Accommodations Program (CAP) office requiring compliance with Section 508 of the Rehabilitation Act as required under Section 6.31 of the contract

The deliverable for this service is a Test Summary Report detailing the procedures used, issues and problems encountered, proposed resolutions and mitigations, and the results of the test, including internal scan, if performed. If the results of the test are that the application passes certification requirements, an NMCI Certification Letter is generated. A copy of the certified solution and, any supporting documentation on CDs along with the bundled reports shall be stored in the Configuration Management Database (CMDB). The certified solution may then be distributed via a separate service offering.

If the results of the test are that the application did not pass certification requirements, the Test Summary Report described above will provide in reasonable detail the reasons for failure. Execution of the proposed resolution or mitigation of the failure is not included in this CLIN.

All software releases must be Functional Area Manager (FAM) approved.

NMCI Software Configuration Management (NSCM) as an agent for Naval Network Warfare Command (NETWARCOM) will control and determine the prioritization and scheduling for certification of the releases to the Contractor's lab for the Navy. For the Marine Corps, Headquarters Marine Corps (HQMC C4) will provide release certification prioritization and Marine Corps Systems Command (MARCORSYSCOM EBSS) will provide release scheduling for the lab.

These CLINs in combination (simple and complex) will support a threshold throughput of 70 applications per month. The Contractor and the Government shall reevaluate every six months any adjustment to the lab threshold throughput to meet enterprise demands.

**0047AA Software Certification – Simple:** This service only applies to software applications (as referenced above) which are installed on a data seat and do not have a separate client or server side. A simple application resides solely on the client and does not rely on network connectivity to perform its basic functions. If the application can operate without network connections (not including print services, network drive access, etc.) it is considered simple. The Contractor will produce a Test Summary Report and, as required, a single Packaging Instance and a single Script not later than 50 days after a task order is approved and the Contractor has received the applicable software.

**0047AB Software Certification – Complex:** This service applies to software applications (as referenced above) that do not qualify for Software Certification – Simple. The Contractor will produce a Test Summary Report and, as required, a single Packaging Instance and a single Script not later than 55 days after a task order is approved and the Contractor has received the applicable software.

**0047AC Supplemental Package:** This service provides an additional packaging instance for an application. The service is required if an application requires more than one packaging instance to operate. The service is not required if the failure to operate is caused by the Contractor's deployment of non-standard seat builds. The service is not available separately but must be ordered with the certification CLIN.

**0047AD Supplemental Script:** This service provides an additional script for a certified application. The service can be ordered if an installation script is needed to enable operation of an existing package at a new location, or to replace an outdated script due to changes at the location such as a new server or a new IP address. The service is not required if the failure to operate is caused by the Contractor's deployment of multiple configurations or seat builds. The service may be ordered separately or with the certification CLIN. If ordered separately, the Contractor shall produce the Script within 10 days of receipt of order.

3. A conformed copy of the revised contract is made a part of this modification as a result of the changes outlined herein

4. All other terms and conditions of contract N00024-00-D-6000 remain unchanged and in full force and effect.
